

# PowerShell 7 Cheat Sheet

## FINDING CMDLETS AND HELP

<b>Get-Command</b>	List available commands. Use -Module, -Noun, -Verb. Wildcards help too
<b>Get-Member</b>	List properties and methods of an object
<b>Get-Help</b>	Help for a command. Use -Online to get latest

## WORKING WITH OBJECTS

Common pattern: Get | Filter/Group/Sort | Modify/Delete/Output/Convert

<b>Where-Object</b>	Filters objects based on value of property
<b>Select-Object</b>	Choose properties of an object to include in pipeline
<b>Group-Object</b>	Group based on property values
<b>Sort-Object</b>	Sort results by property values
<b>Foreach-Object</b>	Act on each object in pipeline
<b>-Parallel</b>	Act on each object in pipeline at the same time
<b>Measure-Object</b>	Measure property values or number of objects

## BUILT-IN VARIABLES

<b>\$Args</b>	Arguments passed into script.
<b>\$Error</b>	Array of errors. \$Error[0] is latest.
<b>\$host</b>	Details on application running PS
<b>\$IsLinux</b>	Returns TRUE on Linux OS
<b>\$IsMacos</b>	Returns TRUE on Mac OS
<b>\$IsWindows</b>	Returns TRUE on Windows OS
<b>\$Profile</b>	Path to PowerShell profiles
<b>\$PSBoundParameterValues</b>	List parameters and current values.
<b>\$PSCommandPath</b>	Full path of script being run
<b>\$PSItem / \$_</b>	Current object in the pipeline
<b>\$PSScriptRoot</b>	Directory the script is run from
<b>\$PSVersionTable</b>	Details on PowerShell version

## OPERATORS

<b>Pipeline</b>	, ?? (If error), && (If success)
<b>Arithmetic</b>	+, -, *, /, %
<b>Assignment</b>	=, +=, -=, *=, /=, %=
<b>Null Coalescing</b>	??
<b>Comparison</b>	-eq, -ne, -gt, -lt, -le, -ge
<b>Wildcard Compare</b>	-like, -notlike
<b>Regex Compare</b>	-match, -notmatch, -replace
<b>Contain Comparison</b>	-in, -notin, -contains, -notcontains
<b>Logical</b>	-and, -or, -xor, -not, !
<b>Type</b>	-is, -isnot, -as
<b>Ternary</b>	(statement) ? (if true) : (if false)

## USEFUL CMDLETS

How To...	Commands
<b>Zip Files</b>	Compress-Archive, Expand-Archive
<b>Date/Time</b>	Get-Date, Set-Date, Get-TimeZone, Set-TimeZone
<b>Event Logs</b>	Get-WinEvent, New-WinEvent
<b>Performance</b>	Get-Counter, Export-Counter, Import-Counter
<b>Clipboard</b>	Get-Clipboard, Set-Clipboard
<b>Reboot</b>	Restart-Computer
<b>Send Output</b>	Out-Printer, Out-Null, Out-File
<b>User Input</b>	Read-Host
<b>Use Jobs</b>	Start-Job, Stop-Job, Get-Job, Receive-Job, Remove-Job
<b>Wait</b>	Start-Sleep
<b>Map Drives</b>	Get-PSDrive, New-PSDrive, Remove-PSDrive
<b>Navigate</b>	Get-Location, Set-Location, Test-Path
<b>File/Folders</b>	New-Item, Get-Item, Get-ChildItem, Get-Content, Set-Content, Move-Item, Rename-Item, Copy-Item, Remove-Item
<b>Display in GUI form</b>	Out-GridView (with -OutputMode and -Passthru) to select one or more items and return to shell

## COMMON PARAMETERS

<b>-WHATIF</b>	Don't make the changes, but output what would
<b>-CONFIRM</b>	Prompt before making changes
<b>-VERBOSE</b>	Display verbose output
<b>-DEBUG</b>	Display debug-level output
<b>-ERRORACTION</b>	Override \$ErrorActionPreference variable
<b>-OUTVARIABLE</b>	Redirect output to a variable
<b>-?</b>	Display help for the cmdlet

## KEYBOARD SHORTCUTS

<b>Esc</b>	Clear line
<b>Tab</b>	Complete partially entered cmdlet/parameter
<b>CTRL+C</b>	Stop processing current command
<b>Up/Down Arrow</b>	Navigate command history
<b>CTRL+S/CTRL+R</b>	Search forward/reverse through history
<b>CTRL+ALT+?</b>	Show all keybindings

## STRINGS

How To...	Commands/Examples
<b>Grep / Search Text</b>	Select-String
<b>Split into array</b>	"one,two,three" -split ","
<b>Join</b>	"one", "two", "three" -join ", and a "
<b>Replace</b>	"http://mysite.com" -replace "http:", "https:"
<b># Decimal Places</b>	"Pi is {0:N2}" -f [Math]::Pi
<b>Format Currency</b>	"The price is {0:C}" -f 1.23
<b>Format All Caps</b>	\$a = "I'm yelling"; \$a.ToUpper()
<b>Format All Lower</b>	\$a = "TOO LOUD"; \$a.ToLower()
<b>Insert Characters</b>	\$a = "abcghij"; \$a.Insert(3,"def")

## LOOPS & BRANCHES

Loop/Branch	How To Use
<b>If/Then/Else</b>	If (\$true) { <this> } else { <that> }
<b>For</b>	For (\$a=0; \$a -lt 10; \$a++) { <this> }
<b>Do...While</b>	Do { <this> } While (\$evaluation)
<b>Do...Until</b>	Do { <this> } Until (\$evaluation)
<b>While</b>	While (\$evaluation) { <this> }
<b>Foreach</b>	Foreach (\$a in \$b) { <this \$a> }
<b>Switch</b>	Switch (\$a) { "one" { <this happens if \$a is "one"> } Default { <this \$a is none of above> } }

## ARRAYS

How To...	Commands
<b>Create Array</b>	\$a = @()
<b>Single Item Array</b>	\$a = @"(one)"
<b>Item Reference</b>	\$a[index] (0 is first)
<b>Range Reference</b>	\$a[0..4] (Returns first 5)
<b>Last Item Reference</b>	\$a[-1]

## MODULES AND PACKAGES

<b>Find-Module</b>	Search PSGallery for PowerShell modules
<b>Find-Package</b>	Search PSGallery, nuget.org for software
<b>Get-Module</b>	Find modules/packages installed on system
<b>Get-Package</b>	Software installed by package management
<b>Other Verbs</b>	Install, Uninstall, Update
<b>Register-PackageSource</b>	Allow package sources for installation
<b>Install-PackageProvider</b>	Allow additional package providers (Gist) or specific versions

## ADVANCED FUNCTION PARAMETER ATTRIBUTES

<b>Mandatory</b>	Will prompt if missing
<b>Position</b>	Allows params in order instead of by name
<b>ValueFromPipeline</b>	Allows pipeline input to parameter
<b>ValueFromPipelineByPropertyName</b>	Pipeline accepted if property name matches
<b>HelpMessage</b>	Sets param help msg
<b>ValidateSet("Choice1","Choice2")</b>	Gives choice, allows tab-complete
<b>ValidateScript({ evaluation script })</b>	Processes an evaluation script
<b>ValidateRange([1..10])</b>	Enforces param values in range
